DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Ferencz et al.

Ferencz et al. teach a method of providing a source of fibers; subjecting the fibers to an electrostatic charge; deflecting the fibers with a non-contacting deflecting device; and collecting the fibers on a moving forming surface to form a non-woven web. [Note Column 2, lines 36-41]

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11

F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-26 are provisionally rejected under the judicially

created doctrine of obviousness-type double patenting as being

unpatentable over claims 1-15 of copending Application No.

10/325,140. Although the conflicting claims are not identical, they are

not patentably distinct from each other because both the instant

application and the '140 application are drawn to a method of making

a non-woven web, on a moving surface using an electrostatic charge

and a deflecting means. However, in the '140 application, the claims

recite charging pins, to eliminate the charging pin and its intended

function would have been obvious to one having ordinary skill in the

art because both the instant application and that of the '140 patent are

drafted with comprising language which permits the elimination or addition of a step plus function.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. Claims 1-26 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-27 of copending Application No.

10/694,420. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the instant application and the '420 application are drawn to a method of making a non-woven web, on a moving surface using an electrostatic charge and a deflecting means. However, in the '420 application, the claims recite that the electrostatic unit has an opposing first and second side with an array on protrusions, the protrusion as admitted in the '420 application are pins which would then generally read on the electrostatic array of pins used in the instant invention. To use the term protrusion for pins would have been obvious to one having ordinary skill in the art at the time the invention was made.
